Well then, here you go! I am using Eclipse as an IDE, so I am sending you my Eclipse project folder. However it should be easy to use any other IDE. You would need the /src, /lib and /cards folder in this case and add the required libraries manually to the build path. If you are using Eclipse, it should be enough to import the project. Please note that you need JDK 1.8u25 or higher in both cases.

Please let me know if you have any more questions. Otherwise: Have fun ;)
